

1.0 Overview of Factuality Evaluation

Factuality assessment is the process of verifying whether verifiable factual claims contained in AI model responses are accurate.

Assessors must evaluate each checkable claim against high-quality, reputable external sources. Evaluations must document the evidence used to verify or refute each claim.

2.0 Identifying Claims

A factual claim is a statement that asserts a verifiable fact about the real world, entities, dates, statistics, scientific principles, etc.

- Checkable claims: 'The Denver Nuggets won the 2023 NBA Championship.'
- Subjective / non-checkable: 'The game was exciting to watch.'
- Ambiguous context: Assess claims in relation to user query and location.

3.0 Researching Claims and Evidence

Assessors must search for reputable external evidence before making a rating decision.

Hierarchy of Source Quality:

1. Primary / Authoritative Sources: Official government portals (.gov, .gov.br), international organizations (WHO, UN)
2. Reputable Secondary Sources: Established news agencies (Reuters, AP News, BBC), major encyclopedias, and
3. Low Quality / Unverifiable: Social media posts, user forums, anonymous blogs, and uncorroborated marketing sites

Evidence must directly confirm or refute the specific entity and predicate in the claim.

4.0 Factuality Rating Scale

Assign one of the six standard ratings:

- Accurate: The claim is confirmed by reputable and authoritative evidence.
- Inaccurate: The claim is contradicted by reputable and authoritative evidence.
- Unsupported: The claim asserts a verifiable fact, but thorough search reveals no reliable corroboration.
- Disputed: Authoritative sources directly disagree on the fact with no prevailing consensus.
- Can't confidently assess: Available evidence is inaccessible, contradictory without resolution, or insufficient.
- No claims present: The sentence contains solely opinions, recommendations, greetings, or non-factual text.

5.0 Human Review and Oversight

The AI agent acts strictly as an assistant providing evidence and suggested ratings. Human assessors maintain final
